Contents of Volume 58

NUMBER 1, JULY 1, 1977

Full Papers

TERRY L. MOEN AND MARION NAMENWIRTH. The Distribution of Soluble Proteins along the Animal–Vegetal Axis of Frog Eggs 1

M. GOULD-SOMERO, L. HOLLAND, AND M. PAUL. Cytochalasin B Inhibits Sperm Penetration into Eggs of *Urechis caupo* (Echiura) 11

BARRY D. SHUR. Cell-Surface Glycosyltransferases in Gastrulating Chick Embryos. I. Temporally and Spatially Specific Patterns of Four Endogenous Glycosyltransferase Activities 23

BARRY D. SHUR. Cell-Surface Glycosyltransferases in Gastrulating Chick Embryos. II. Biochemical Evidence for a Surface Localization of Endogenous Glycosyltransferase Activities 40

ELIZABETH C. RAFF. Microtubule Proteins in Axolotl Eggs and Developing Embryos 56

KERRY B. CLEGG AND LAJOS PIKÓ. Size and Specific Activity of the UTP Pool and Overall Rates of RNA Synthesis in Early Mouse Embryos 76

LLOYD A. GREENE. Quantitative *in Vitro* Studies on the Nerve Growth Factor (NGF) Requirement of Neurons. I. Sympathetic Neurons 96

LLOYD A. GREENE. Quantitative *in Vitro* Studies on the Nerve Growth Factor (NGF) Requirement of Neurons. II. Sensory Neurons 106

RONALD L. DAVIS AND JOHN A. KIGER, JR. A Clonal Analysis of Tergite Development in *Drosophila of Ultraabdominal* and Paradoxical Genotypes 114

YUTAKA KASUYA, NORIO MATSUKI, AND KOKI SHIGENOBU. Changes in Sensitivity to Anoxia of the Cardiac Action Potential Plateau during Chick Embryonic Development 124

DARREL R. FALK. Genetic Mosaics of the *rudimentary* Locus of *Drosophila melanogaster:* A Genetical Investigation into the Physiology of Pyrimidine Synthesis 134

C. TOUGARD, R. PICART, AND A. TIXIER-VIDAL. Cytogenesis of Immunoreactive Gonadotropic Cells in the Fetal Rat Pituitary at Light and Electron Microscope Levels 148

ROBERT E. SEEGMILLER. Time of Onset and Selective Response of Chondrogenic Core of 5-day Chick Limb after Treatment with 6-Aminonicotinamide 164

M. DARMON, P. BARRAND, P. BRACHET, C. KLEIN, AND L. PEREIRA DA SILVA. Phenotypic Suppression of Morphogenetic Mutants of *Dictyostelium discoideum* 174

R. STEINHARDT, R. ZUCKER, AND G. SCHATTEN (with an Appendix by R. Zucker). Intracellular Calcium Release at Fertilization in the Sea Urchin Egg 185

Brief Notes

IRMA THESLEFF, EERO LETHTONEN, JORMA WARTIOVAARA, AND LAURI SAXÉN. Interference of Tooth Differentiation with Interposed Filters 197

LAWRENCE L. WISEMAN. Can the Differential Adhesion Hypothesis Explain How an Aggregate of Strongly Cohesive Cells Can Be Penetrated by More Weakly Cohesive Cells? 204

HERMAN DENIS AND MAURICE WEGNEZ. Biochemical Research on Oogenesis. Oocytes of *Xenopus laevis* Synthesize but Do Not Accumulate 5S RNA of Somatic Type 212

NUMBER 2, JULY 15, 1977

Full Papers

ROBERT EARLE WATERMAN. Ultrastructure of Oral(Buccopharyngeal)Membrane Formation and Rupture in the Hamster Embryo 219

A. K. DESHPANDE AND M. A. Q. SIDDIQUI. A Reexamination of Heart Muscle Differentiation in the Postnodal Piece of Chick Blastoderm Mediated by Exogenous RNA 230

ROSEMARY BACHVAROVA AND VICTOR DE LEON. Stored and Polysomal Ribosomes of Mouse Ova 248

JOSEPH FRANKEL, E. MARLO NELSEN, AND LESLIE M. JENKINS. Mutations Affecting Cell Division in *Tetrahymena pyriformis*, Syngen 1. II. Phenotypes of Single and Double Homozygotes 255

ELIEZER LIFSCHYTZ AND DANA HAREVEN. Gene Expression and the Control of Spermatid Morphogenesis in *Drosophila melanogaster* 276

J. MALLER, M. WU, AND J. C. GERHARD. Changes in Protein Phosphorylation Accompanying Maturation of *Xenopus laevis* Oocytes 295

JOHN E. MORRIS, JOHN J. HOPWOOD, AND ALBERT DORFMAN. Biosynthesis of Glycosaminoglycans in the Developing Retina 313

KAREN A. KNUDSEN AND ALAN F. HORWITZ. Tandem Events in Myoblast Fusion 328

GÜNTER KORGE. Larval Saliva in *Drosophila melanogaster:* Production, Composition, and Relationship to Chromosome Puffs 339

BARBARA M. VERTEL AND DONALD A. FISCHMAN. Mitochondrial Development during Myogenesis 356

CHARLES N. DAVID AND SUSAN MURPHY. Characterization of Interstitial Stem Cells in Hydra by Cloning 372

R. L. PRIOR AND R. A. SCOTT. Ontogeny of Gluconeogenesis in the Bovine Fetus: Influence of Maternal Dietary Energy 384

ALAN R. GINGLE. cAMP Enhanced Aggregation of Cells from Early Chick Embryos 394

KATHRYN E. Y. RICHARDSON AND BRIAN S. SPOONER. Mammalian Pancreas Development: Regeneration and Differentiation *in Vitro* 402

Brief Notes

MARIETA B. HEATON. Retrograde Axonal Transport in Lateral Motor Neurons of the Chick Embryo prior to Limb Bud Innervation 421

ALLEN W. SCHUETZ, T. G. HOLLINGER, R. A. WALLACE, AND D. A. SAMSON. Inhibition of [^{3}H]Vitellogenin Uptake by Isolated Amphibian Oocytes Injected with Cytoplasm from Progesterone-Treated Mature Oocytes 428

Author Index for Volume 58 434

The Subject Index for Volume 58 will appear in the December 1977 issue as part of a cumulative index for the year 1977.

Information for Authors

Developmental Biology will publish papers on problems of development in the broadest sense. Embryonic and postembryonic development, growth, regeneration and tissue repair in plants and animals, and the analysis of these phenomena at the molecular and cellular levels are topics suitable for the journal. Papers on reproductive biology, aging, and teratology will be published only when they bear on developmental mechanisms of general interest. Papers are sought that employ the techniques and concepts of many disciplines including those of biochemistry, biophysics, cytology, experimental morphogenesis, genetics including cell genetics, immunology, neurobiology, physiology, and microbiology. In all areas, analytical rather than descriptive studies will be favored.

Original papers only will be considered. Submission of a manuscript implies the authors' assurance that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Explicit proof of these implied assurances may be required at the Editor's discretion. Articles and any other material published in *Developmental Biology* represent the opinions of the author(s), and should not be construed to reflect the opinions of the editor(s), the publisher, or the Society for Developmental Biology.

Articles usually do not exceed 15,000 words and must be preceded by an abstract of about 200 words that should be fully intelligible by itself. Brief notes are 2500 words or less, including the bibliography, and should have an abstract of less than 100 words. All papers will be published in English.

Manuscripts should be concise. Full documentation of results in support of conclusions should be combined with maximum brevity compatible with clarity. The discussion section should relate the present work to previous knowledge but should not be expanded into a review of the field. The standard order of sections is: abstract, introduction, materials and methods, results and discussion. Combined results and discussion may be used. In the manuscript acknowledgment, references, footnotes, tables, and figure legends should follow the discussion in that order. All pages of the manuscript should be numbered consecutively and typed double-spaced throughout. Authors should provide a running title of 35 letters and spaces or less. Use footnotes sparingly. Cite them with superscript numbers and type them on a separate sheet. With rare exceptions do not italicize for emphasis.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Abbreviations and units should be used consistently. Consult the lists published in the *Proceedings of the National Academy of Sciences (U.S.A.)* the *Journal of Biological Chemistry*, and *Biochemistry* for standard abbreviations which need not be defined. Collect all abbreviations into a footnote and refer to it at the first use of an abbreviation. The use of units should follow the Système International. Use prefixes, e.g., μM, not $10^{-6} M$. Note that M stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name.

Line drawings should be made with India ink on smooth white paper or professional-quality drafting paper. Do not submit original line drawings larger in size than 13 x 10 in.;

instead enclose smaller prints. Good quality prints are acceptable in any case. Drawings will be reduced as much as is compatible with the complexity of the figure, usually to column or page width. The lettering should be large enough to be at least 1.5 mm high after reduction.

Photographs should be the actual size for reproduction and labeled with letters 2 to 4 mm high. Figures should fit column or page width and should be at most 8 in. long. If the author decides to bleed the page (no margins), labels and figure numbers should be no closer than 3/4 in. to the margin. Figures to be bled must be 7 × 10 1/4 in. (17.8 × 26 cm) to allow trimming. When several figures appear together as one plate, mount them on cardboard or paper as close together as possible. The engraver will tool thin white lines between figures. Give magnifications in the legends or indicate them with a scale marker on the photograph. The second copy of each manuscript must include good-quality glossy prints of all photographs. Two reviewers' copies should be submitted when originals are oversized or mounted on heavy cardboard. The author will defray the expense of color plates.

Tables should be typed on separate pages and numbered consecutively with Arabic numerals, and each should have a concise heading.

References to the literature should be cited as: Doe (1965) has observed that . . . ; (Doe, 1955); Doe *et al.* (1960) should be used in the case of articles with more than two authors. Use suffixes a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Numbered references will no longer be accepted. Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals according to *Chemical Abstracts' Service Source Index*.

Page proofs rather than galleys will be sent. This speeds production. Detailed instructions will be sent with proofs. A quick response and minimal changes on proof are imperative to maintain schedules.

Features will include announcements of meetings and courses in the field of developmental biology, and some meeting reports. Persons interested in preparing meeting reports are encouraged to contact the Editor.

To submit a manuscript, send two copies to Igor B. Dawid, Department of Embryology, Carnegie Institution of Washington, 115 West University Parkway, Baltimore, Maryland 21210, Tel. (301) 235-0460. Indicate the name, address, and telephone number of the author who should be contacted in editorial matters.
